Write the code in lstlisting

[label=list:first, style=Arduino, caption=Blink.ino] /* Blink Turns on an LED on for one second, then off for one second, repeatedly.

Most Arduinos have an on-board LED you can control. On the Uno and Leonardo, it is attached to digital pin 13. If you're unsure what pin the on-board LED is connected to on your Arduino model, check the documentation at http://arduino.cc

This example code is in the public domain.

modified 8 May 2014 by Scott Fitzgerald */

// the setup function runs once when you press reset or power the board void setup() // initialize digital pin 13 as an output. pinMode(13, OUTPUT);

// the loop function runs over and over again forever void loop() digitalWrite(13, HIGH); // turn the LED on (HIGH is the voltage level) delay(1000); // wait for a second digitalWrite(13, LOW); // turn the LED off by making the voltage LOW delay(1000); // wait for a second
