1 Education

BSc. Honours Computer Science With Software Engineering SpecializationUniversity of WindsorWindsor, ONJun 2021

World Wide Web Information Systems Development

2 Work Experience

AmazonSoftware Development Engineer InternToronto, ONMay 2020 – Aug 2020

Designed and implemented a dashboard using **React** and **TypeScript** to visualize data stored in **DynamoDB**, decreasing time to understand delivery driver work sessions by over 10 times.

Ensured only authorized employees have access to the application by creating an **AWS Lambda@Edge** function to intercept and sign valid requests.

Devised and deployed the infrastructure in TypeScript through **AWS CDK**, then created efficient algorithms to process data from a custom **REST API**, so it could scale to handle millions of deliveries.

Setup a CI/CD pipeline and exceeded requirements in each stage, which lead to the application being pushed to production.

University of WindsorResearch Assistant (RA)Windsor, ONFeb 2020 - May 2020

Developed a Personal Health Record (PHR) system in **Spring** based on the theoretical model outlined in https://research.library.mun.c Kumar's thesis.

Applied the mCP-ABE encryption scheme using the JPBC library, so patients have fine-grained access control over their health records with the ability to instantly revoke access.

JoaTuSoftware Engineer InternMontreal, QCDec 2018 – May 2019

Rewrote legacy **Django code** in **Ruby in Rails** and refactored it to make the system more extensible.

Created **UML** diagrams and documented where features were implemented, to make the codebase more maintainable.

3 Projects

Automated Spear-Phisherhttps://github.com/Aarif123456/Fb-Twitter-guiPython, PySpark, Selenium, Apache, NLP, Big Data A security research tool to send targeted spam messages on either Facebook or Twitter. The program analyzes the feed of its target to increase the effectiveness of the messages.

Image Repositoryhttps://github.com/Aarif123456/image_repositoryJava, PHP, React, TypeScript, Maven, GCP, MySQL A full-stack image repository, where users can store their files. Created a GCP cloud function to implement CP-ABE encryption and used it to ensure files are secure at rest.

Biometric Dynamic Keystroke Spooferhttps://github.com/Aarif123456/KeystrokeDynamicsSpooferPython, Object-Oriented Design, CyberSecurity A program that authenticates users based on their typing patterns. And a spoofer that uses the genetic algorithm to mimic the user's typing pattern.

Distributed Key-Value storehttps://github.com/Aarif123456/Distributed-DBJava, Distributed System, Computer Networks, Concurrency A distributed key-value store which automatically replicates data in the background while the user manages their data. Implemented a custom P2P protocol to maximize fault tolerance and scalability.

War of Weebleshttps://github.com/Aarif123456/GoalOrientedBehaviourC#, Unity, Concurrency, Artificial Intelligence A capture-the-flag-styled shooting game composed of AI-controlled players. The agents change their goals based on various factors, such as their health, current weapon, their personality and what they see.

4 Skills

Languages:Java, C++, Python, C#, PHP, Prolog, Bash, C, Racket, SQL
Web Development:React, JavaScript, TypeScript, HTML/CSS
Technology:Git, AWS, GCP, Azure, Docker, Unity, Apache, LaTeX, MongoDB, DynamoDB, Neo4j
