[inline]asymptote [paper=a4paper,hmargin=2cm,vmargin=2.5cm]geometry parskip
Asymptote 3D graphics
Purely 2D asymptote drawings:
size(5cm); draw(circle((1,0), 1.5), blue); draw(ellipse((1,0), 1.5, 0.5));
3D asymptote drawings with `import three;`
size(5cm,0); import three; currentprojection=orthographic(5,4,2); draw(unitcube,magenta);
size(6cm,0); import bsp; real u=2.5; real v=1; currentprojection=oblique; path3 y=plane((2u,0,0),(0,2v,0),(-u,-v,0)); path3 l=rotate(90,Z)*rotate(90,Y)*y; path3 g=rotate(90,X)*rotate(90,Y)*y; face[] faces; filldraw(faces.push(y),project(y),yellow); filldraw(faces.push(l),project(l),lightgrey); filldraw(faces.push(g),project(g),gree add(faces);
size(5cm,0); import three; draw(unitsphere,lightcyan);
3D plots work too!
import graph3; size(0,200); size3(200,IgnoreAspect); currentprojection=orthographic(4,6,3); real x(real t) return cos(2pi*t); real y(real t) return sin(2pi*t); real z(real t) return t; path3 p=graph(x,y,z,0,2.7,operator ..); draw(p,Arrow3); scale(true); xaxis3(XZ()*"x",Bounds,red,InTicks(Label,2,2)); yaxis3(YZ()*"y",Bounds,red,InTicks(zaxis3(XZ()*"z",Bounds,red,InTicks);
Awwww beautiful!
import graph3; size(200,0); currentprojection=perspective(10,8,4); real f(pair z) return 0.5+exp(-abs(z)^2); $draw((-1,-1,0)--(1,-1,0)--(1,1,0)--(-1,1,0)--cycle)$; $draw(arc(0.12Z,0.2,90,60,90,25),ArcArrow3)$ $surface(f,(-1,-1),(1,1),nx=5,Spline)$; $xaxis3(Label("\mathrm{x}"),red,Arrow3)$; $yaxis3(Label("\mathrm{y}"),red,Arrow3)$; $zaxis3(X$ $true),red,Arrow3)$; $draw(s,lightgray,meshpen=black+thick(),nolight,render(merge=true))$; $label("\mathrm{O}",O,-Z+Y,red)$;

Download the PDF and open it in a suitable viewer like Adobe Reader. You'll get interactive views of the 3D objects!
