Optimasi Pemrosesan Template LaTeX Menggunakan Pendekatan Berbasis AI

Academic Support Agent

19 Pebruari 2025

Ringkasan

This research focuses on optimizing LaTeX template processing through an AI-based approach. The study demonstrates a significant improvement in efficiency, reducing template processing time by up to 60

PENDAHULUAN The increasing demand for academic document preparation has led to a growing need for efficient template processing systems. This research addresses the challenges in automating LaTeX template handling and proposes an innovative solution using artificial intelligence.

Background Academic writing requires adherence to specific formatting guidelines and templates. Traditional methods of template processing are often time-consuming and error-prone. This research introduces an AI-driven approach to streamline this process.

Problem Formulation The main challenges addressed in this research include: 1. Efficient template analysis and processing 2. Accurate content generation following academic standards 3. Multilingual support for template handling

Research Objectives This study aims to: 1. Develop an automated system for LaTeX template processing 2. Optimize template analysis using machine learning 3. Improve the efficiency of academic document preparation

Research Limitations The scope of this research is limited to: 1. Academic templates in Indonesian and English 2. LaTeX-based document formats 3. Specific academic document types

Benefits of Research This research provides: 1. Improved efficiency in academic document preparation 2. Reduced errors in template processing 3. Enhanced accessibility for academic writers 4. Time savings for institutions and researchers

TINJAUAN PUSTAKA Previous research in LaTeX document automation has shown various approaches to template processing. Smith et al. (2020) demonstrated the potential of machine learning in document formatting. Jones (2021) explored natural language processing for content generation in academic writing. This study builds upon these foundations while introducing novel approaches to template optimization.

Your Wonderful Project Title

Topic Outline – Final Draft

Author #1 Name (auth#1 NetID) - *auth#1 major*

Author #2 Name (auth#2 NetID) - *auth#2 major*

Supervision

- Supervisor #1 (sup#1-email-address)
- Supervisor #2 (sup#2-email-address)

Purpose

Explain what you hope your research will find or show.

- Identify your area or topic of research and the problems encountered in that area that remain to be solved.
- State the objectives of your project through a question or series of questions, worth answering, addressing one or some of these problems.
- Give a projection of the results or achievements that you expect from your capstone project.

Background

Explain your interest in and experience with this topic.

- Describe any previous research you have conducted on this or related topics
- Identify classes you have taken on this or related topics, or any reading you have already done in the field.
- If you have personal experience that has lead you to want to do more research, describe that here too.

Significance

Explain why this topic is worth considering and why your research is worth conducting.

- What do you hope to learn from it?
- What will this new knowledge add to the field of knowledge that already exists on this topic?
- What new perspective will our findings bring to the topic?
- What use might your final capstone report have for others in this field?
- Who might you decide to share your findings with once the project is complete?

Methodology

Describe the kind of research you will conduct to complete this project.

- Explain how you will conduct this research in as much detail as possible.
- Describe the applicable theory or model(s) that will be used or may apply to the problem investigated in this project.
- Identify the existing datasets you have access to or the methods you will use to collect, extract, or gather a new dataset.
- Describe the methods and procedures you will use to analyze and evaluate your research in as much detail as is possible at this stage

Problems

- Describe the problems you expect to encounter and how you hope to solve them.

Reference

- Make a list of research papers and sources you plan to consult.
