Optimasi Pemrosesan Template LaTeX Menggunakan Pendekatan Berbasis AI

Academic Support Agent

19 Pebruari 2025

Ringkasan

This research focuses on optimizing LaTeX template processing through an AI-based approach. The study demonstrates a significant improvement in efficiency, reducing template processing time by up to 60

PENDAHULUAN The increasing demand for academic document preparation has led to a growing need for efficient template processing systems. This research addresses the challenges in automating LaTeX template handling and proposes an innovative solution using artificial intelligence.

Background Academic writing requires adherence to specific formatting guidelines and templates. Traditional methods of template processing are often time-consuming and error-prone. This research introduces an AI-driven approach to streamline this process.

Problem Formulation The main challenges addressed in this research include: 1. Efficient template analysis and processing 2. Accurate content generation following academic standards 3. Multilingual support for template handling

Research Objectives This study aims to: 1. Develop an automated system for LaTeX template processing 2. Optimize template analysis using machine learning 3. Improve the efficiency of academic document preparation

Research Limitations The scope of this research is limited to: 1. Academic templates in Indonesian and English 2. LaTeX-based document formats 3. Specific academic document types

Benefits of Research This research provides: 1. Improved efficiency in academic document preparation 2. Reduced errors in template processing 3. Enhanced accessibility for academic writers 4. Time savings for institutions and researchers

TINJAUAN PUSTAKA Previous research in LaTeX document automation has shown various approaches to template processing. Smith et al. (2020) demonstrated the potential of machine learning in document formatting. Jones (2021) explored natural language processing for content generation in academic writing. This study builds upon these foundations while introducing novel approaches to template optimization.

MidnightBlue**AGGRASTAT dosage et administration** MidnightBlueYahyaoui Mohamed Kaddour, MD
MidnightBlueService de cardiologie, EH Dr.Benzerdjeb MidnightBlue19 Pebruari 2025

1 Administration

Mettre les 50cc du flacon dans 250cc de SGI ou SSI.
Bien mélanger

1.1 Pas d'angioplastie prévue avant 04 heures

- dose de charge: 0.4 microgram/kg/min pendant 30 minutes.
- dose d'entretien: 0.1microgram/kg/min les 48heures restantes.

1.2 Syndrome coronaire aigu

Dans ce cas là l'Aggrastat doit être administré conjointement avec *l'héparine non fractionnée!*

- dose de charge: 25microgram/kg sur 3 minutes. initiée avec le début de l'angioplastie.
- dose d'entretien: 0.15 microgram/kg/min pendant 18-24h voir 48h.

2 Précautions

- les patients les plus à risque de saignement sont :
  - faible masse corporelle
  - les femmes
  - sujets âgés
- Dans ces cas là, surveiller l'effet de l'héparinothérapie

2.1 incompatibilités

l'Aggrastat est incompatible avec le **Diazepam**, ne pas l'administrer dans la même voie d'abord.

2.2 Insuffisance rénale

en cas de Clcréatinine $<$ 30ml/min : diminuer les doses d'Aggrastat de **50%**.

3 Surdosage

en cas de surdosage:

- arrêter immédiatement la perfusion dès les premiers signes de saignement, le plus souvent oral.
- transfusion de sang si celà s'avére nécessaire.

- l'Aggrastat peut être épuré, le cas échéant par **hémodialyse**
