Equations

Pythagorean theorem can be written in one short equation as: $a^2 + b^2 = c^2$ where c is the longest side of the triangle, a and b are the other two sides.

Other useful equations (thank you *John Napier*):

$$\log_b(x \cdot y) = \log_b(x) + \log_b(y) \tag{1}$$

$$\log_b\left(\frac{x}{y}\right) = \log_b(x) - \log_b(y) \tag{2}$$

$$\log_b(x^p) = p \cdot \log_b(x) \tag{3}$$

$$\log_b(x) = y \quad \text{exactly if} \quad b^y = x \tag{4}$$
