This template is a based on SINTEF Presentation from Federico Zenith and its derivation Beamer-LaTeX-Themes from Liu Qilong

GDUT style adaptation contributed by Jiahao Li

In the following you find a brief introduction on how to use LaTeX and the beamer package to prepare slides, based on the one written by Federico Zenith for SINTEF Presentation

Beamer for SINTEF slides

- We assume you can use LaTeX; if you cannot, you can learn it here
-

Beamer vs. PowerPoint

Compared to PowerPoint, using LaTeX is better because:

- It is not What-You-See-Is-What-You-Get, but What-You-*Mean*-Is-What-You-Get:
  you write the content, the computer does the typesetting
- Produces a `pdf`: no problems with fonts, formulas, program versions
- Easier to keep consistent style, fonts, highlighting, etc.
- Math typesetting in TeX is the best:

$$\texttt{i}\}\frac{\partial}{\partial t}\Psi($$

Getting Started

Selecting the SINTEF Theme

To start working with `sintefbeamer`, start a LaTeX document with the preamble:

Title page

To set a typical title page, you call some commands in the preamble:

The Commands for the Title Page

```
\title{Sample Title}
\subtitle{Sample subtitle}
\author{First Author, Second Author}
\date{\today} % Can also be (ab)used for conference name
```

You can then write out the title page with `\maketitle`.
To set a background image use the `\titlebackground` command before `\maketitle`; its only argument is the name (or path) of a graphic file.
If you use the starred version `\titlebackground*`, the image will be clipped to a split view on the right side of the title slide.

Writing a Simple Slide

It's really easy!

- A typical slide has bulleted lists

Writing a Simple Slide

It's really easy!

- A typical slide has bulleted lists
- These can be uncovered in sequence

Writing a Simple Slide

It's really easy!

- A typical slide has bulleted lists
- These can be uncovered in sequence

Code for a Page with an Itemised List

```
\begin{frame}{Writing a Simple Slide}
 \framesubtitle{It's really easy!}
 \begin{itemize}[<+->]
  \item A typical slide has bulleted lists
```

sintefyellow

Changing Slide Style

- You can select the white or *maincolor* slide style *in the preamble* with `\themecolor{white}` (default) or `\themecolor{main}`
  - You should *not* change these within the document: Beamer does not like it
  - If you *really* must, you may have to add `\usebeamercolor[fg]{normal text}` in the slide
- You can change the footline colour with `\footlinecolor{color}`
  - Place the command *before* a new `frame`
  - There are four "o□cial" colors: `maincolor`, `sintefyellow`, `sintefgreen`, `sintefdarkgreen`
  - Default is no footline; you can restore it with `\footlinecolor{}`
  - Others may work, but no guarantees!
  - Should *not* 0 G0 g68q5 G˙/F4434footline99 0.2 0.2 3851 Tf 92.997

Blocks

Standard Blocks

These have a color coordinated with the footline (and grey in the blue theme)

```
\begin{block}{title}
 content...
\end{block}
```

[black]sinteflightgreenColour Blocks Similar to the ones on the left, but you pick the colour. Text will be white by default, but you may set it with an optional argument.

```
\begin{colorblock}[black]{sinteflightgre
 content...
\end{colorblock}
```

The “o□cial” colours of colour blocks are:

 `sinteflilla`,  `maincolor`,
 `sintefdarkgreen`, and

Using Colours

- You can use colours with the `\textcolor{<color name>}{text}` command
- The colours are defined in the `sintefcolor` package:
  - Primary colours: `maincolor` and its sidekick `sintefgrey`
  - Three shades of green: `sinteflightgreen`, `sintefgreen`, `sintefdarkgreen`
  - Additional colours: `sintefyellow`, `sintefred`, `sinteflilla`
    - These may be shaded—see the `sintefcolor` documentation or the SINTEF profile manual
- Do *not* abuse colours: `\emph{}` is usually enough
- Use `\alert{}` to bring the focus somewhere

Using Colours

- You can use colours with the \textcolor{<color name>}{text} command
- The colours are defined in the sintefcolor package:
  - Primary colours: maincolor and its sidekick sintefgrey
  - Three shades of green: sinteflightgreen, sintefgreen, sintefdarkgreen
  - Additional colours: sintefyellow, sintefred, sinteflilla
    - These may be shaded see the sintefcolor documentation or the SINTEF pro le manual
- Do not abuse colours \emph{} is usually enough
- Use \alert{} to bring the focus somewhere
- If you highlight too much, you don't highlight at all!

Adding images

Adding images works like in normal LaTeX:

Code for Adding Images

```
\usepackage{graphicx}
% ...
\includegraphics[width=\textwidth]
{assets/logo_RGB}
```

Splitting in Columns

Splitting the page is easy and common; typically, one side has a picture and the other text:

This is the first column

And this the second

Column Code

```
\begin{columns}
 \begin{column}{0.6\textwidth}
  This is the first column
 \end{column}
 \begin{column}{0.3\textwidth}
  And this the second
 \end{column}
 % There coul
```

[assets/background_negative]*SpecialSlides*
Chapter slides

Chapter slides

- Similar to `frames`, but with a few more options
- Opened with
  `\begin{chapter}[<image>]{<color>}{<title>}`
- Image is optional, colour and title are mandatory
- There are seven "o□cial" colours: `maincolor`, `sintefdarkgreen`, `sintefgreen`, `sinteflightgreen`, `sintefred`, `sintefyellow`, `sinteflilla`.
  - Strangely enough, these are *more* than the o□cial colours for the footline.
  - It may still be a nice touch to change the footline of following slides to the same color of a chapter slide. Your choice.
- Otherwise, `chapter` behaves just like `frame`.

assets/background$_a$*lternativeSide* – *PictureSlides*
Opened with `\begin{sidepic}{<image>}{<title>}`

Otherwise, `sidepic` works just like `frame`

Fonts

- The paramount task of fonts is being readable
- There are good ones...
  - Use serif fonts only with high-definition projectors
  - Use sans-serif fonts otherwise (or if you simply prefer them)
- ... and not so good ones:
  - `Never use monospace for normal text`
  - Gothic, calligraphic or weird fonts: should always: be avoided

Look

- To insert a final slide with the title and final thanks, use `\backmatter`.
  - The title also appears in footlines along with the author name, you can change this text with `\footlinepayoff`
  - You can remove the title from the final slide with `\backmatter[notitle]`
- The aspect ratio defaults to 16:9, and you should not change it to 4:3 for old projectors as it is inherently impossible to perfectly convert a 16:9 presentation to 4:3 one; spacings *will* break
  - The `aspectratio` argument to the `beamer` class is overridden by the SINTEF theme
  - If you *really* know what you are doing, check the package code and look for the `geometry` class.

Good Luck!

- Enough for an introduction! You should know enough by now
- If you have corrections or suggestions, send them to me!
