1 Introduction

This unofficial IATBR 24 LaTeX template replicates the suggested Word template provided in the conference's website. An example of an in-text citation could be Garrow2009. Multiple in-text citations are supported, as Bierlaire2003,Koppelman2005. Parenthetical citations are also possible Bierlaire2003.

[1]

1.1 Subsection in Introduction Section

[7-9]

It is very easy to include Equations and to reference them. For example, **Equation 1** represents the probability of an observed sequence of choices for individual n in an MMNL model.

$$P_n(\Omega) = \int_\beta \prod_{t=1}^{T} \prod_{m=1}^{M} P_{n,m,t}\left(i^*_{n,m,t}|\beta\right) f\left(\beta|\Omega\right) \tag{1}$$

$$LL(\Omega) = \sum_{n=1}^{N} ln\left(\int_\beta \left[\prod_{t=1}^{T} \prod_{m=1}^{M} P_{n,m,t}\left(i^*_{n,m,t}|\beta\right)\right] \left(\beta|\Omega\right) d\beta\right) \tag{2}$$

$$F = ma \tag{3}$$

[5]

2 Background

We can reference figures easily. For example **Figure 1** represents a Gian Grouper fish.

[2-3]

3 Methodology

[5-6]. Finally, it is also possible to generate a table such as **Table 1**.

Table 1: Sample Table

Ullamcorper	**Cursus**	**Rhoncus**	
Entry 1	Entry 2	Entry 3	
Entry 4	Entry 5	Entry 6
