Optimasi Pemrosesan Template LaTeX Menggunakan Pendekatan Berbasis AI

Academic Support Agent

19 Pebruari 2025

Ringkasan

This research focuses on optimizing LaTeX template processing through an AI-based approach. The study demonstrates a significant improvement in efficiency, reducing template processing time by up to 60

Bab 1

PENDAHULUAN

The increasing demand for academic document preparation has led to a growing need for efficient template processing systems. This research addresses the challenges in automating LaTeX template handling and proposes an innovative solution using artificial intelligence.

Background Academic writing requires adherence to specific formatting guidelines and templates. Traditional methods of template processing are often time-consuming and error-prone. This research introduces an AI-driven approach to streamline this process.

Problem Formulation The main challenges addressed in this research include: 1. Efficient template analysis and processing 2. Accurate content generation following academic standards 3. Multilingual support for template handling

Research Objectives This study aims to: 1. Develop an automated system for LaTeX template processing 2. Optimize template analysis using machine learning 3. Improve the efficiency of academic document preparation

Research Limitations The scope of this research is limited to: 1. Academic templates in Indonesian and English 2. LaTeX-based document formats 3. Specific academic document types

Benefits of Research This research provides: 1. Improved efficiency in academic document preparation 2. Reduced errors in template processing 3. Enhanced accessibility for academic writers 4. Time savings for institutions and researchers

Bab 2

TINJAUAN PUSTAKA

Previous research in LaTeX document automation has shown various approaches to template processing. Smith et al. (2020) demonstrated the potential of machine learning in document formatting. Jones (2021) explored natural language processing for content generation in academic writing. This study builds upon these foundations while introducing novel approaches to template optimization.

Ringkasan

This is a sample document for writing a thesis which will be submitted to the Degree Programs in Systems and Information. The main purpose of this document is to reduce the author's trouble in making title. Of course you can create your title page from scratch. But your style must fulfill the requirements such as margins.

Bab 3

Introduction

This is a sample document for writing a thesis which will be submitted to the Degree Programs in Systems and Information. The main purpose of this document is to reduce the author's trouble in making title. Of course you can create your title page from scratch. But your style must fulfill the requirements such as margins.

This document is also prepared for intention of unifying the thesis style. You can write your thesis based on this document. This document does not include how to write good thesis. So, you should consult advisor(s) about the concrete example of thesis and other details.

Bab 4

Format

This chapter describes how to write the cover and body of the paper.

4.1 Cover Page

The cover page is created by \maketitle, which should contain a string corresponding to each of the following items.

Title: The title should appear in \title. To change the line, enter \\. If the title is more than four lines long, the cover page will be overflowed and the style file "sie-en.sty" will have to be changed.

Author: Name of author should be entered in \author.

Advisor: Name of your advisor should be entered in \advisor.

Major Field: Name of your major field should be entered in \majorfield.

Degree Program: Name of degree program should be entered in \programfield.

Date: Month and year of completion should be entered in \graduatemonth and \graduateyear, respectively.

4.2 Main body

The body of the text should be in one column.

Tables and figures are numbered, captioned and referred to in the text. Tables 4.1 and figure reffigure:sample are examples of tables and figures respectively. The description of the table is often written above and the description of the figure below. The package used to insert the figure The package used to insert the figure should be chosen freely according to the environment in which it is used.

For more information, see the (slightly outdated) [**?**, **?**] reference book. Also, see Haruhiko Okumura's "Japanese TeX FAQ" at `http://www.matsusaka-u.ac.jp/~okumura/texfaq/` is a good source of information on TEXin Japanese. It is a good source of information on Japanese TeX. The following are examples of references to specific papers [**?**].

Tabel 4.1: Sample of Table

Fiscal Year	1st	2nd	3rd	4th
1995	85	92	86	88
1996	83	89	90	102
1997	88	87	91	112
1998	144	93	90	115
