Author's Name

1. Partial derivatives.
   (a) $f_x(x, y) = x^2 + y^2$.
   (b) $f_y(x, y) = \sin(xy)$.
2. This is a problem about a double integral!

   $$\int_{y=0}^{y=6} \int_{x=0}^{x=6-y} f(x, y)\ dx\ dy = 8/3.$$

   or if you don't want it displayed, $\int_{y=0}^{y=6} \int_{x=0}^{x=6-y} f(x, y)\ dx\ dy = 8/3$, or perhaps you prefer $\int_{y=0}^{y=6} \int_{x=0}^{x=6-y} f(x, y)\ dx\ dy = 8/3$?
3. Let's take partial derivatives a different way!

   $$\frac{\partial}{\partial x} xy = y.$$

   If you need a particular symbol and don't know the code for it, try `detexify.kirelabs.org`.
