Abstract

[This abstract must provide a succinct and informative condensation of your work. Candidates are welcome to prepare a lengthier abstract for inclusion in the dissertation, and provide a shorter one in the CaltechTHESIS record.]

Introduction Start off all chapters with `chapter`. `\extrachapter` will give you an unnumbered chapter that's added to the Table of Contents.

Here's an example of a citation GMP81. Here's another PP98. These will appear in the big bibliography at the end of the thesis.

If you're new to LaTeX and would like to begin by learning the basics, please see our free online course available at:

`https://www.overleaf.com/latex/learn/free-online-introduction-to-latex-part-1`

You can define nomenclatures as you talk about key terms in your thesis. So what's a galaxy? GalaxyA system of stars independent from all other systems

1 This is a Section

[1-2]

Figure 1: This is a figure

1.1 This is a subsection

[3] AsteroidA very small planet ranging from 1,000 km to less than one km in diameter. Asteroids are found commonly around other larger planets

[4-5]

Here's an endnote.Endnotes are notes that you can use to explain text in a document.

Area	Count
North	100
South	200
East	80
West	140

Table 1: This is a table

2 This is Another Section

[6-7]

This is the Second Chapter If you'd like to have separate bibliographies at the end of each chapter, put a `refsection` around the material of each chapter, then cite as usual – e.g. GMP81,Ful83. Then do a `\printbibliography` just before the `refsection` ends.

[heading=subbibliography]

This is the Third Chapter

Cahn:etal:2015

[You can have chapters that were published as part of your thesis. The text style of the body should be single column, as it was submitted to the publisher, not formatted as the publisher did.]

This is the Fourth Chapter This is the Fifth Chapter This is the Sixth Chapter This is the Seventh Chapter This is the Eighth Chapter
