Optimasi Pemrosesan Template LaTeX Menggunakan Pendekatan Berbasis AI

Academic Support Agent

19 Pebruari 2025

Ringkasan

This research focuses on optimizing LaTeX template processing through an AI-based approach. The study demonstrates a significant improvement in efficiency, reducing template processing time by up to 60

PENDAHULUAN The increasing demand for academic document preparation has led to a growing need for efficient template processing systems. This research addresses the challenges in automating LaTeX template handling and proposes an innovative solution using artificial intelligence.

Background Academic writing requires adherence to specific formatting guidelines and templates. Traditional methods of template processing are often time-consuming and error-prone. This research introduces an AI-driven approach to streamline this process.

Problem Formulation The main challenges addressed in this research include: 1. Efficient template analysis and processing 2. Accurate content generation following academic standards 3. Multilingual support for template handling

Research Objectives This study aims to: 1. Develop an automated system for LaTeX template processing 2. Optimize template analysis using machine learning 3. Improve the efficiency of academic document preparation

Research Limitations The scope of this research is limited to: 1. Academic templates in Indonesian and English 2. LaTeX-based document formats 3. Specific academic document types

Benefits of Research This research provides: 1. Improved efficiency in academic document preparation 2. Reduced errors in template processing 3. Enhanced accessibility for academic writers 4. Time savings for institutions and researchers

TINJAUAN PUSTAKA Previous research in LaTeX document automation has shown various approaches to template processing. Smith et al. (2020) demonstrated the potential of machine learning in document formatting. Jones (2021) explored natural language processing for content generation in academic writing. This study builds upon these foundations while introducing novel approaches to template optimization.

PhDs in the Humanities Grant application form 2022 NWO.jpg

1 Details of main applicant

Title:
Initials:
Prefix:
Surname:
Address for correspondence (for the entire period of the PhDs in the Humanities round): Telephone:
Cell phone:
Email:
Website (optional):

2 Co-applicants

State the details of any co-applicants here.

3 Title of research proposal

4 Summary

5 Resubmitted proposal

6 PhD candidate

7 Curriculum Vitae PhD candidate

[label=()]Education Honours, prizes, scholarships and grants Relevant academic experience Other relevant positions Output Motivation for doing PhD research

8 Period of funding

9 Description of the proposed research

The maximum permitted size of the text is 2500 words (excluding the list of references). Example reference ([**?**])

10 Number of words

State the total number of words used in section 9.

11 Summary in keywords

State a maximum of 5 keywords that in your opinion best characterize the content of the research proposal.

12 Data management

Answer these four questions about data management within the intended research project:

1. Will data be collected or generated that are suitable for reuse? Yes: Then answer questions 2 to 4 No: Then explain why the research will not result in reusable data or in data that cannot be stored or data that for other reasons are not relevant for reuse

2. Where will the data be stored during the research?

3. After the project has been completed, how will the data be stored for the long-term and made available for the use by third parties? To whom will the data be accessible?

4. Which facilities (ICT, (secure) archive, refrigerators or legal expertise) do you expect will be needed for the storage of data during the research and after the research? Are these available?*

*ICT facilities for data storage are considered to be resources such as data storage capacity, bandwidth for data transport and calculating power for data processing.

13 Institutional embedding and supervision

Describe the research group that the candidate will be part of and state how the day-to-day supervision of the candidate will be realised. Maximum Â$\frac{1}{2}$ page A4.

14 Work programme

Specify and phase the work plan for the intended duration of the grant. Please bear in mind that the writing phase for the final publication is a fundamental component of the work programme. Time required for holidays must also be allowed for. Also allow time for the training and supervision programme. Maximum 1 page A4.

15 Research budget

The grants to be awarded for personnel costs are in line with the agreements made between NWO and the universities about this in the Approval of funding for scientific research 2008. The research budget that can be applied for consists of (1) personnel costs (`www.nwo.nl/salary-tables`), which include a benchfee of 5000 for the entire funding period, and (2) material costs that are directly related to the research up to a maximum of 5000 for the entire funding period. No specifications are needed for the benchfee; clear specifications are needed for the material costs (see call for proposals).

16 Summary for non-specialists (in Dutch or English)

Provide a summary for non-specialists about your proposed research (in Dutch or English). This summary should be 300-500 words long.

17 Title and summary for newsletters and website (in Dutch and English)

Provide a title and a summary (both in Dutch and in English) that, if the application is granted, will be used in the newsletters and on the website. The summary should be 50-100 words long.
