Date Performed:	January 1, 2012
TA:	Ryan Rodriguez

1 Purpose

The purpose of this lab is to _____. We will learn skills $\{skill_1, \ldots, skill_n\}$ by doing the following steps _____ described in the lab manual.

2 Experiments

Here, you should do the following:

- Create a section for each major section in the lab - you can copy and paste the section you are reading now.
- In each of these new appropriately titled sections:
  - fill in some of the major steps you took to complete the exercise
  - Feel free to discuss any challenges you faced and overcame in completing the lab.
  - Include images when they are helpful to illustrate your point. Schematics from MML might be something you'd like to include.
- Finally, create a subsection titled 'results' for each section you've created.
  - In the results section, describe the implications of the work you've done.
  - *Note:* You can create subsection by doing `\subsection{TITLE}` instead of `\section{TITLE}`.

2.1 Results

For each experiment, add a results section.

3 Conclusion

Sum up what you did, what you learned.

4 Answers to Questions

Answer any questions, if applicable. You can do so, for example, like this:

[style=nextline]Answer: $e^{\pm i\theta} = \cos\theta \pm i\sin\theta$ Answer: 4 Answer: Ryan Rodriguez

Pustaka

Question 1: What is Euler's formula? **Question 2: How many bits in a nibble?** **Question 3: Who is your favorite TA**
