Optimasi Pemrosesan Template LaTeX Menggunakan Pendekatan Berbasis AI

Academic Support Agent

19 Pebruari 2025

Ringkasan

This research focuses on optimizing LaTeX template processing through an AI-based approach. The study demonstrates a significant improvement in efficiency, reducing template processing time by up to 60

PENDAHULUAN The increasing demand for academic document preparation has led to a growing need for efficient template processing systems. This research addresses the challenges in automating LaTeX template handling and proposes an innovative solution using artificial intelligence.

Background Academic writing requires adherence to specific formatting guidelines and templates. Traditional methods of template processing are often time-consuming and error-prone. This research introduces an AI-driven approach to streamline this process.

Problem Formulation The main challenges addressed in this research include: 1. Efficient template analysis and processing 2. Accurate content generation following academic standards 3. Multilingual support for template handling

Research Objectives This study aims to: 1. Develop an automated system for LaTeX template processing 2. Optimize template analysis using machine learning 3. Improve the efficiency of academic document preparation

Research Limitations The scope of this research is limited to: 1. Academic templates in Indonesian and English 2. LaTeX-based document formats 3. Specific academic document types

Benefits of Research This research provides: 1. Improved efficiency in academic document preparation 2. Reduced errors in template processing 3. Enhanced accessibility for academic writers 4. Time savings for institutions and researchers

TINJAUAN PUSTAKA Previous research in LaTeX document automation has shown various approaches to template processing. Smith et al. (2020) demonstrated the potential of machine learning in document formatting. Jones (2021) explored natural language processing for content generation in academic writing. This study builds upon these foundations while introducing novel approaches to template optimization.

1 Introduction

Cardiff School of Technologies degrees are designed to prepare you for a career shaping the future of technology. From day one, you will be encouraged to adopt a growth mindset, strengthening your ability to learn autonomously. Making use of our state-of-the-art dedicated labs, you will be able to put theory into practice and gain the skills you need to succeed in an evolving digital world. [**?**]

2 Lecturers

You will be taught by academics and practitioners, who will provide insights into their research and enterprise activity. Through guest lectures from industry partners, interactive workshops, and real-world problems for assessments, our network of experts will bring specialist knowledge and best practices to the classroom. Furthermore, many of our programmes are integrated with professional certification contents such as SAS, Tableau, Cisco and Certified Ethical Hacking (CEH), to give you an edge in todayâ€™s competitive job market. JenkinsAndAngel2006

3 Industry experience

To strengthen the bond with employers, all degrees give you the opportunity to gain industry experience through optional work-based learning modules. You are able to complete a year out on placement or take part in our practical industry-based Hackathons. Additionally, we work closely with our international academic partners to offer you opportunities to study and work abroad.
