Abstract

- We investigate if neural networks can be used to create art which is novel, detailed, and aesthetically pleasing. We evaluate two state-of-the-art

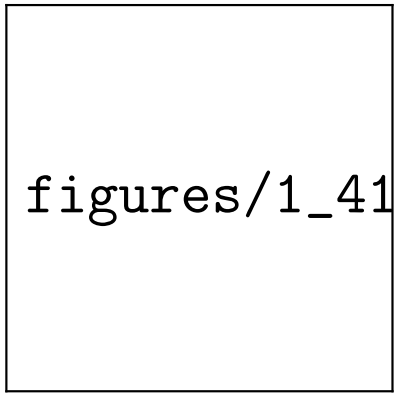

Theorem

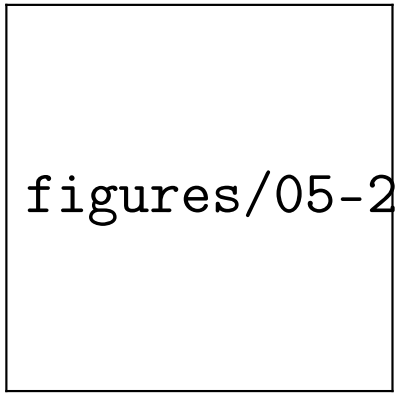

If $F(G(x)) = I(x)$ *and* F *is an injection, then* $G(F(x)) = I$.

Proof: By contradiction, assume $F(G(x)) = I(x)$ *and* $G(F(x)) \neq I$. *Then* $\exists x \in Y, G(F(x)) = y \wedge y \neq x$. *By hypothesis we know* $F(G(x)) = I(x)$, *therefore:*

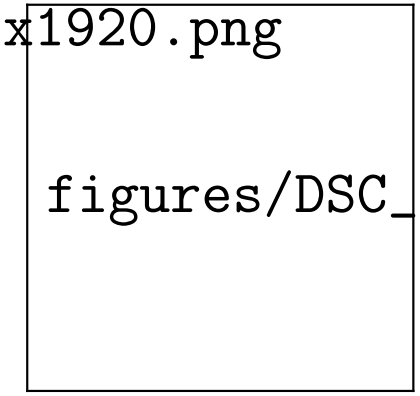

$$G(F(x)) = y$$
