Show that there exists no nontrivial unramified extensions of .
If $K/$ is a nontrivial number field, then $|K| > 1$. But then K has a prime factor so that some prime ramifies in K.
Complete the following:

[(a)]How does one prove a cotheorem? Compute $\int \cos x \, dx$. How does one square $abcd$?

[(a)]Use rollaries. We have

$$\int \cos x \, dx = \sin x + C \tag{1}$$

We can check eq:integral:

$$ddx \left(\sin x + C\right) = \cos x$$

This is routine.

Prove that $\sqrt{2}$ is irrational.
Assume that $\sqrt{2} = ab$, where $a, b \in$. Without loss of generality, we may assume $\gcd(a, b) = 1$. Then we have $\sqrt{2} = ab$
$\sqrt{2}^2 = (ab)^2$
$2 = a^2b^2$
$a^2 = 2b^2$ But then from eq:implication2, we know that a^2 is even so that a is even. But then we must have

$$2a^2 = b^2$$

so that b^2 is even, implying b is even. But then $\gcd(a, b) \geq 2$, a contradiction.
