1 Introduction

This is example text. Note that JLA uses up to 3 levels of headings (e.g. 1., 1.1, 1.1.1). Please do not add additional levels beyond the three that have been provided. This is an example of including math $\cos \pi = -1$ and α directly within the text[1]. Important formulas should be presented on a separate line as shown in the next section (See Formula 1). All figures and tables should be explicitly referenced in the appropriate part of the text (See Table 1 and Figure 2).

This template use the bibliatex-apa. This is an example on how to cite Figueredo:2009dg. Here is a citation when you want to address the authors directly, for example the work of archambault2009student. See more information on different types of citations here
