1 Introduction

Your introduction goes here! Some examples of commonly used commands and features are listed below, to help you get started.

2 Some LaTeX Examples

2.1 Sections

Use `sections` and `subsections` to organize your document. LaTeX handles all the formatting and numbering automatically. Use `ref` and `label` for cross-references — this is Section 2, for example.

2.2 Tables and Figures

Use `tabular` for basic tables. You can upload a figure (JPEG, PNG or PDF) using the files menu. To include it in your document, use the `includegraphics` command (see the comment below in the source code).

2.3 Mathematics

LaTeX is great at typesetting mathematics. Let $X_1, X_2, \ldots, X_n$ be a sequence of independent and identically distributed random variables with $E[X_i] = \mu$ and $Var[X_i] = \sigma^2 < \infty$, and let

$$S_n = \frac{X_1 + X_2 + \cdots + X_n}{n} = \frac{1}{n}\sum_{i}^{n} X_i$$

denote their mean. Then as n approaches infinity, the random variables $\sqrt{n}(S_n - \mu)$ converge in distribution to a normal $\mathcal{N}(0, \sigma^2)$.

2.4 Lists

You can make lists with automatic numbering ...

1. Like this,
2. and like this.

... or bullet points ...

- Like this,
- and like this.
