Bab 3

Introduction

The first chapter of a Capstone document is usually an overview of what you've done. Often, it is the last chapter you will write.

Theorem 3.1 *Sometimes, you will want to state the main results of your document in the introduction.*

Remark 3.2 *LaTeX is clever, and automatically generates numbers for theorems, remarks and anything else you might want to label. You can give these an invisible name using* `\label{your-key}` *and referring back to it later using* `\ref{your-key}`*, for example the following number will be the same as the theorem above: Theorem 3.1.*

Similarly, you will want to reference external sources as you write your document. The basic way to do this is to add `\bibitem{your-chosen-key}`s at the end of your document (this template has three examples), and use `\cite{your-chosen-key}` to refer to it. For instance, if I wanted to cite the example document by Noether, I can write [2].

Mathematics is added using dollar signs for in-line math, i.e. $x^2 + y^2 = z^2$, or by using open-bracket close-bracket for a displayed equation.

$$c^2 = a^2 + b^2 - 2ab\cos\theta.$$

Ordered lists are written using the `enumerate` environment:

1. Hello.
2. This is the second item in my list.

I can also write unordered lists using `itemize`:

- Hello.
- This is now the second item in my list.

Bab 4

Your first main chapter

Here is the meat of your document

4.1 Your first section of the first main chapter

... goes here.

Bab 5

Conclusions

And here is the final chapter showing how clever you are ....
