Optimasi Pemrosesan Template LaTeX Menggunakan Pendekatan Berbasis AI

Academic Support Agent

19 Pebruari 2025

Ringkasan

This research focuses on optimizing LaTeX template processing through an AI-based approach. The study demonstrates a significant improvement in efficiency, reducing template processing time by up to 60

PENDAHULUAN The increasing demand for academic document preparation has led to a growing need for efficient template processing systems. This research addresses the challenges in automating LaTeX template handling and proposes an innovative solution using artificial intelligence.

Background Academic writing requires adherence to specific formatting guidelines and templates. Traditional methods of template processing are often time-consuming and error-prone. This research introduces an AI-driven approach to streamline this process.

Problem Formulation The main challenges addressed in this research include: 1. Efficient template analysis and processing 2. Accurate content generation following academic standards 3. Multilingual support for template handling

Research Objectives This study aims to: 1. Develop an automated system for LaTeX template processing 2. Optimize template analysis using machine learning 3. Improve the efficiency of academic document preparation

Research Limitations The scope of this research is limited to: 1. Academic templates in Indonesian and English 2. LaTeX-based document formats 3. Specific academic document types

Benefits of Research This research provides: 1. Improved efficiency in academic document preparation 2. Reduced errors in template processing 3. Enhanced accessibility for academic writers 4. Time savings for institutions and researchers

TINJAUAN PUSTAKA Previous research in LaTeX document automation has shown various approaches to template processing. Smith et al. (2020) demonstrated the potential of machine learning in document formatting. Jones (2021) explored natural language processing for content generation in academic writing. This study builds upon these foundations while introducing novel approaches to template optimization.

[C]

In this Line write down the Title with 200 Characters

Principal Author (1); Author (2); Author (2) - 150 characters

(1) Author Job, University / Company - 200 characters
Professor, PhD, Department of Structures and Foundation Engineering - 200 characters

Mail Address - 200 characters

Abstract

In this space write down the Paper's Summary. The Summary and Keywirds must be all in this page - 500 words, 1500 characters. **In case of pappers written in Spanish an abstract in English is mandatory.**
keyword: 80 characters

Instruction gray

1. Papers should be written in English or Spanish. Please follow strictly international grammatical rules for both languages. Poor written papers in any of the allowed languages will be subjected to rejection by the editorial borad.
2. Papers, including illustrations, tables and bibliography, are limited to 12 pages. Pages must be white, according to this template/model, with their corresponding headers and footnotes.
3. The font, for the body of the text, must be simple "Arial", size 12. They must in compliance with the standards established by this model.

gray**MODEL**

1 Introduction

1.1 Problem Statement

1.1.1 Background

Text in Arial size 12 – write your paper down here

2 Distress Ocurrences

In several kinds of piles the cracks .....

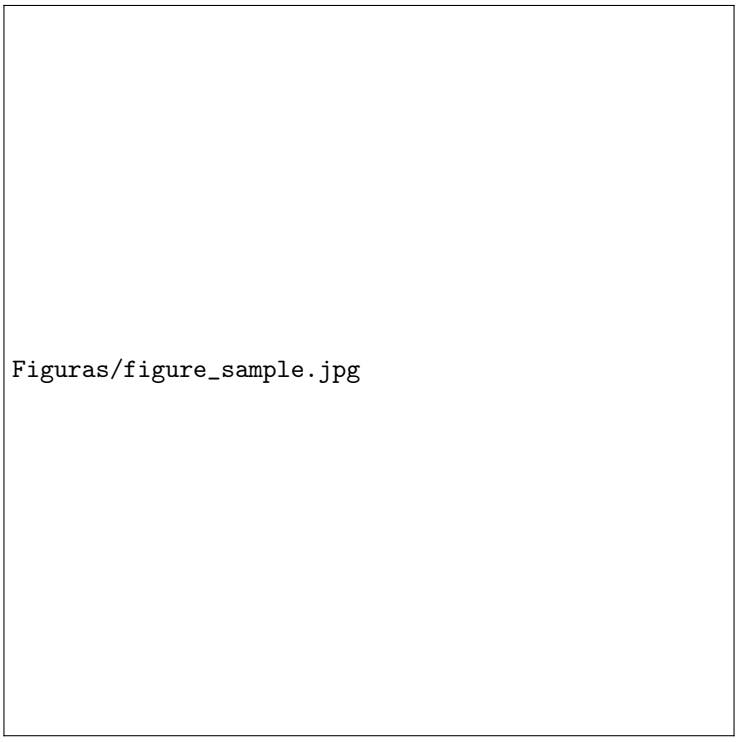

2.1 Distress Modeling

2.1.1 Mazars Model

Since the superposition of the stresses intensity factor ....

$$G = \frac{K_I^2}{E} + \frac{K_I^2}{E} + \frac{(1+U)(1-2U)K_{III}^2}{vE} = \frac{K_I^2}{E} + \frac{K_{II}^2}{E} + \frac{K_{III}^2}{\mu} \qquad \text{(Equation 1)}$$

Values computed for G by using K_I and K_{II} as shown in figures 4 e 5 as reported by shah1995fracture or anticipated by comite1993ceb, or even through experimental methods like proposed by bittencourt2000estudo ....
