Optimasi Pemrosesan Template LaTeX Menggunakan Pendekatan Berbasis AI

Academic Support Agent

19 Pebruari 2025

Ringkasan

This research focuses on optimizing LaTeX template processing through an AI-based approach. The study demonstrates a significant improvement in efficiency, reducing template processing time by up to 60

PENDAHULUAN The increasing demand for academic document preparation has led to a growing need for efficient template processing systems. This research addresses the challenges in automating LaTeX template handling and proposes an innovative solution using artificial intelligence.

Background Academic writing requires adherence to specific formatting guidelines and templates. Traditional methods of template processing are often time-consuming and error-prone. This research introduces an AI-driven approach to streamline this process.

Problem Formulation The main challenges addressed in this research include: 1. Efficient template analysis and processing 2. Accurate content generation following academic standards 3.

Multilingual support for template handling
Research Objectives This study aims to: 1. Develop an automated system for LaTeX template processing 2. Optimize template analysis using machine learning 3. Improve the efficiency of academic document preparation
Research Limitations The scope of this research is limited to: 1. Academic templates in Indonesian and English 2. LaTeX-based document formats 3. Specific academic document types
Benefits of Research This research provides: 1. Improved efficiency in academic document preparation 2. Reduced errors in template processing 3. Enhanced accessibility for academic writers 4. Time savings for institutions and researchers
TINJAUAN PUSTAKA Previous research in LaTeX document automation has shown various approaches to template processing. Smith et al. (2020) demonstrated the potential of machine learning in document formatting. Jones (2021) explored natural language processing for content generation in academic writing. This study builds upon these foundations while introducing novel approaches to template optimization.

Introdução

Queimadores Atmosféricos

- O que são?
- Onde são usados?
- Tipos de Queimadores Atmosféricos

Installation

Source files

The theme contains 4 source files:

- `beamercolorthemeFeather.sty`
- `beamerouterthemeFeather.sty`
- `beamerinnerthemeFeather.sty`
- `beamerthemeFeather.sty`

Installation

Local and Global installation

The theme can be installed for **local** or **global** use.

Installation

Local and Global installation

The theme can be installed for **local** or **global** use.

Local Installation

- Local installation is the simplest way of installing the theme.
- You need to placing the 4 source files in the same folder as your presentation. When you download the theme, the 4 theme files are located in the `local` folder.

Global Installation

- If you wish to make the theme globally available, you must put the files in your local latex directory tree. The location of the root of the local directory tree depends on your operating system and the latex distribution.
- Detailed steps on how to proceed installation under various operating systems can be found at Beamer documentation.

Installation

Required Packages

For using the Feather Theme you will need the Bemaer class installed and the following 2 packages

- TikZ[1]
- calc

Due to the fact that the packages are very common they should be included in your latex distribution in the first place.

[1] TikZ is a package for creating beautiful graphics. Have a look at these or the .

User Interface

Loading the Theme and Theme Options

The Presentation Theme

The Feather Theme can be loaded in a familiar way. In the reamble of your `tex` file you must type

```
\usetheme[<options>]{Feather}
```

The presentation theme loads the inner, outer and color Feather theme files and passes the `<options>` on to these files.

The Inner and Outher Themes

If you wish you can load only the inner, or the outher theme directly by

`\useinnertheme{Feather}` (and it has no options)

`\useoutertheme[<options>]{Feather}` (it has one option)

`progressstyle={fixedCircCnt or movingCircCnt}`

- which set how the progress is illustrated;
- the value `movingCircCnt` is the default.

The Color Theme

Also you can load only the color theme by writing in the preamble of the tex file

- `\usecolortheme{Feather}`

...or to change the colors of the various elements in the theme

- Change the bar colors:
  `\setbeamercolor {Feather}{fg=<color>, bg=<color>}`
- Change the color of the structural elements:
  `\setbeamercolor{structure}{fg=<color>}`
- Change the frame title text color:
  `\setbeamercolor{frametitle}{fg=<color>}`
- Change the normal text color background:
  `\setbeamercolor{normal text}{fg=<color>, bg=<color>}`

The Feather Background Image

- In Feather theme, the title page frame and the last frame have the Feather image as the background image.
- The Feather background image can be produced to any frame by wrating on the begining at the choosen frame the following

```
{\1bg
\begin{frame}[<options>]{Frame Title}{Frame Subtitle}
...
\end{frame}}
```

Thank you for using Feather Beamer Theme!
