.There Is No Largest Prime Number The proof uses *reductio ad absurdum*. There is no largest prime number.

1. <1-| alert@1> Suppose p were the largest prime number.
2. <2-> Let q be the product of the first p numbers.
3. <3-> Then $q + 1$ is not divisible by any of them.
4. <1-> But $q + 1$ is greater than 1, thus divisible by some prime number not in the first p numbers.
