Models of Computation Assessed Coursework I A. Student
This document is a skeleton which provides macros to help typeset your solution to the coursework.
Rules can be typeset like this: *[left=e.var] x $\in \mathrm{dom}(s)\langle x, s, h\rangle \Downarrow_e \langle s(x), s, h\rangle$ $*\,[left = e.num]\ \langle n, s, h\rangle \Downarrow_e \langle n, s, h\rangle$

$*[left = e.add]\langle E_1, s, h\rangle \Downarrow_e \langle n_1, s', h'\rangle\langle E_2, s', h'\rangle \Downarrow_e \langle n_2, s'', h''\rangle n_3 = n_1 \pm n_2\langle E_1 + E_2, s, h\rangle \Downarrow_e \langle n_3, s'', h''\rangle$

$*\,[left = e.new]a \notin \mathrm{dom}(h)(a+1) \notin \mathrm{dom}(h)\langle \texttt{newpair}, s, h\rangle \Downarrow_e \langle a, s, h[a \mapsto 0][a+1 \mapsto 0]\rangle[1]$

$*\,[left = e.fst]\langle E, s, h\rangle \Downarrow_e \langle a, s', h'\rangle a \in \mathrm{dom}(h')\langle E.\texttt{fst}, s, h\rangle \Downarrow_e \langle h'(a), s', h'\rangle$

$*\,[left = e.snd]\langle E, s, h\rangle \Downarrow_e \langle a, s', h'\rangle a + 1 \in \mathrm{dom}(h')\langle E.\texttt{snd}, s, h\rangle \Downarrow_e \langle h'(a+1), s', h'\rangle$
Derivations can be typeset as in Figure

$$(\dagger) \equiv *[left =$$

$\vee$I-r] *[Left=$\neg$I] *[Left=$\neg$E] *[Left=$\vee$I-l] $\neg(p \vee \neg p), p \vdash p\neg(p \vee \neg p), p \vdash p$
$*\,[Left = Ax]\ \neg(p \vee \neg p) \vdash \neg(p \vee \neg p)\neg(p \vee \neg p), p \vdash \bot\neg(p \vee \neg p) \vdash \neg p\neg(p \vee \neg p) \vdash p \vee \neg p * [left =$ $\neg\neg$E] *[Left=$\neg$I] *[Left=$\neg$E] ($\dagger$)
$*\,[Left = Ax]\ \neg(p \vee \neg p) \vdash \neg(p \vee \neg p)\neg(p \vee \neg p) \vdash \bot \vdash \neg\neg(p \vee \neg p) \vdash p \vee \neg p Aderivation$
Types: $\Gamma; s; h \vdash$ well-typed
$\Gamma \vdash E : \tau$
$hv : \tau$

Suppose that $\Gamma; s; h \vdash$ well-typed. We wish to show that

$$\Gamma \vdash E : \tau hv : \tau.$$
