Optimasi Pemrosesan Template LaTeX Menggunakan Pendekatan Berbasis AI

Academic Support Agent

19 Pebruari 2025

Ringkasan

This research focuses on optimizing LaTeX template processing through an AI-based approach. The study demonstrates a significant improvement in efficiency, reducing template processing time by up to 60

Bab 1

PENDAHULUAN

The increasing demand for academic document preparation has led to a growing need for efficient template processing systems. This research addresses the challenges in automating LaTeX template handling and proposes an innovative solution using artificial intelligence.

Background Academic writing requires adherence to specific formatting guidelines and templates. Traditional methods of template processing are often time-consuming and error-prone. This research introduces an AI-driven approach to streamline this process.

Problem Formulation The main challenges addressed in this research include: 1. Efficient template analysis and processing 2. Accurate content generation following academic standards 3. Multilingual support for template handling

Research Objectives This study aims to: 1. Develop an automated system for LaTeX template processing 2. Optimize template analysis using machine learning 3. Improve the efficiency of academic document preparation

Research Limitations The scope of this research is limited to: 1. Academic templates in Indonesian and English 2. LaTeX-based document formats 3. Specific academic document types

Benefits of Research This research provides: 1. Improved efficiency in academic document preparation 2. Reduced errors in template processing 3. Enhanced accessibility for academic writers 4. Time savings for institutions and researchers

Bab 2

TINJAUAN PUSTAKA

Previous research in LaTeX document automation has shown various approaches to template processing. Smith et al. (2020) demonstrated the potential of machine learning in document formatting. Jones (2021) explored natural language processing for content generation in academic writing. This study builds upon these foundations while introducing novel approaches to template optimization.

Project Title

Annual Progress Review Report

by

Student Name

Astrophysics Research Centre
School of Mathematics and Physics
Queen's University Belfast

Supervisor(s)
Dr A. N. Other
Dr S. O. Else

19 Pebruari 2025

Abstract

Provide an abstract summarising the key information in the report. As a guide, the overall report length should be approximately 10 pages, not including cover page, table of contents or references. The layout of sections provided here is a suggested structure but can be adapted as seen fit by the student and/or supervisor. There are also examples of how to cite references, include figures and cross-reference different parts of the report.

APR Report Requirements

For the written component of their APR, students must submit either (years are based on full-time study):

2nd/3rd/4th year: A first-author manuscript submitted (or about to be submitted - must be a complete version) to a peer-reviewed journal.

OR

3rd/4th year: A current compilation of their (well developed) thesis.

OR

A detailed report outlining their research achievements over the last year and a plan for the immediate future (∼10 pages). This template is provided for aiding with this option.

3rd/4th year students should also submit a thesis plan for any outstanding chapters along with a timeline for completion.

If preparing a report, students can use work they have prepared for paper drafts/conference proceedings/internal reports to minimise the time required but should ensure this reads as an up-to-date, coherent account of the status of their PhD project.

Bab 3

Research Achievements

You can summarise, in list form, your main achievements in the last year to provide an overview of your activities that you can expand on in later chapters.

1. Presented a poster titled “My research" at the Physics Conference in Belfast on 1st Jan 2000.
2. I developed a model on “..." that will be a key part of a publication planned for the coming year.
3. I was co-author on a paper titled “..." (provide reference)

Bab 4

Background

In this section, provide a background to the research in the form of a literature review[1] with appropriate citations to relevant work.

You can add both textual and parenthetical references as appropriate — e.g., 2012PhLB..716....1A published an article with very rapid citation rates, but is gradually becoming eclipsed from competition in recent years [e.g.,][to name but a few]2018Natur.556...43C, 2018PhRvD..98c0001T, 2019ApJ...873..111I.

[1] A literature review may not be suitable for, e.g., pure mathematics students. However, these students should still try to set the scene and explain the need for their research project, i.e., why is it novel and timely to do this research now?

Bab 5

Research to date

In this section, please summarise the research undertaken to-date, including figures, tables, initial interpretations of results, etc.. The title can be changed to something more relevant to the work discussed and can be divided into separate sections and subsections as appropriate. A basic layout is below but can be adapted as seen fit.

5.1 Methodology

Techniques employed to conduct the presented research.

5.2 Results and Discussion

Gambar 5.1: Plot of $y = x$. Here y represents the really important data and the trend line has been determined using method A.

The original hypothesis is clearly/not supported by the data shown in figure 5.1.

5.3 Conclusions

Summarise the work in this chapter and provide the key scientific conclusions.

Bab 6

Research Plan

In this section, please outline the short- and long-term goals of the research including how these will fit into a thesis framework[1]. For example, you can refer the reader to Section 6.1 for your short-term goals, and Section 6.2 for your long-term goals.

6.1 Short-term Goals

My immediate short-term goals are outlined below.

1. Short-term goal 1.
2. Short-term goal 2.
3. Short-term goal 3.

6.2 Long-term Goals

The project's long-term goals are outlined below.

1. Long-term goal 1.
2. Long-term goal 2.
3. Long-term goal 3.

[1]The descriptions of goals and deliverables can be transformed into Gantt charts where applicable
